
ABSTRACT

af Disclosed herein is a gateway arrangement for receiving first and second types of traffic. The arrangement includes first and second gateways. The first gateway is arranged to separate the first and second types traffic. The first type of traffic is output to the second gateway. The second gateway is arranged to extract information from the first type of traffic and output the extracted information to the first gateway. The first gateway has an output interface arranged to output the second type of traffic dependent upon the extracted information.
